## **DETAILED ACTION**

### Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on December 10, 2010 has been entered.

### **REASONS FOR ALLOWANCE**

2. The following is an examiner's statement of reasons for allowance: the claim combination of a fuel comprising an anode in contact with an alkaline earth carbonate, activated carbon and water and comprising an electrolyte comprising a hydrated alkaline earth chloride selected from the group consisting of hydrated magnesium chloride, hydrated calcium chloride, hydrated strontium chloride, and mixtures thereof.

Cooper et al. (US 2002/0106549) discloses a fuel cell (10) ([0021], Figure 1) comprising an anode (14), a cathode (16), and a ceramic separator (18) that separates the anode (14) and the cathode (16). While Cooper additionally discloses an electrolyte (24) comprising lithium, potassium, and/or sodium carbonates ([0024]) as well as a carbon fuel (22), the reference does not teach or suggest an anode in contact with an alkaline earth carbonate and activated carbon or an electrolyte comprising a hydrated alkaline earth chloride selected from the group consisting of hydrated magnesium

chloride, hydrated calcium chloride, hydrated strontium chloride, and mixtures thereof as an obvious variant.

Tao (US 2002/0015877) discloses a fuel cell (10) ([0020], Figure 1) comprising an anode (16) in contact with an alkaline earth carbonate ([0033]) and activated carbon ([0023]), a cathode (20), a membrane ([0007], [0020], see "electrolyte contacts both the anodic section and the cathodic section", Figures 1-2), and an electrolyte (18). However, the reference does not teach or suggest an electrolyte comprising a hydrated alkaline earth chloride selected from the group consisting of hydrated magnesium chloride, hydrated calcium chloride, hydrated strontium chloride, and mixtures thereof as an obvious variant.

Pesavento (US 6,200,697) discloses a fuel cell (1) (abstract, Figure 1) comprising an anode (19), a cathode (15), a membrane (C5/L16-25), and a carbon fuel (21, 33). While the reference discloses using a molten electrolyte in the form of hydroxide that is selected from the group consisting of aluminum, calcium, cesium, potassium, sodium, rubidium, and strontium, the reference does not teach or suggest an anode in contact with an alkaline earth carbonate and activated carbon or an electrolyte comprising a hydrated alkaline earth chloride selected from the group consisting of hydrated magnesium chloride, hydrated calcium chloride, hydrated strontium chloride, and mixtures thereof as an obvious variant.

Ishida et al. (US 4,711,828) discloses a fuel cell (1) comprising an anode (5), a cathode (6), a membrane (14), and an electrolyte comprising magnesium chloride (C3/L20). Ishida additionally teaches a carbon fuel (see "carbon dioxide", C1/L62-

Art Unit: 1725

**68).** However, the reference does not teach or suggest an anode in contact with an alkaline earth carbonate and activated carbon as an obvious variant.

Berger et al. (US 3,497,389) discloses a fuel cell (10) (C1/L30-39, Figure 1) comprising an anode (14), a cathode (16), a membrane (12) and an electrolyte comprising calcium chloride (C2/L57-62). However, the reference does not teach or suggest an anode in contact with an alkaline earth carbonate and activated carbon as an obvious variant.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
